The CYK Algorithm

- *The membership problem*:
  - Problem:
    - Given a context-free grammar **G** and a string **w**
      - **G** = (V, ∑ ,P , S) where
        - » V finite set of variables
        - » ∑ (the alphabet) finite set of terminal symbols
        - » P finite set of rules
        - » S start symbol (distinguished element of V)
        - » V and ∑ are assumed to be disjoint
      - **G** is used to generate the string of a language
  - Question:
    - Is **w** in **L**(**G**)?

The CYK Algorithm

The CYK Algorithm Basics

- The Structure of the rules in a Chomsky Normal Form grammar

- Uses a “dynamic programming” or “table-filling algorithm”

Chomsky Normal Form

- *Normal Form* is described by a set of conditions that each rule in the grammar must satisfy
- Context-free grammar is in CNF if each rule has one of the following forms:
  - $A \rightarrow BC$ at most 2 symbols on right side
  - $A \rightarrow a$, or terminal symbol
  - $S \rightarrow \lambda$ null string

  where $B, C \in V - \{S\}$

Construct a Triangular Table

- Each row corresponds to one length of substrings
  - Bottom Row – Strings of length 1
  - Second from Bottom Row – Strings of length 2

    .

    .

  - Top Row – string ‘w’

Construct a Triangular Table

- $\mathbf{X_{i,\,i}}$ is the set of variables A such that
  $A \rightarrow w_i$ is a production of G

- Compare at most n pairs of previously computed sets:
  $(\mathbf{X_{i,\,i}}, \mathbf{X_{i+1,\,j}}), (\mathbf{X_{i,\,i+1}}, \mathbf{X_{i+2,\,j}}) \ldots (\mathbf{X_{i,\,j-1}}, \mathbf{X_{j,\,j}})$

Example CYK Algorithm

- Show the CYK Algorithm with the following example:
  - CNF grammar **G**
    - S → AB | BC
    - A → BA | a
    - B → CC | b
    - C → AB | a
  - **w** is baaba
  - Question Is **baaba** in L(G)?

Constructing The Triangular Table

- Table for string ‘**w**’ that has length 5
- The algorithm populates the triangular table

Example (Result)

- Is baaba in L(G)?

Yes

We can see the S in the set X_{1n} where ‘n’ = 5
We can see the table
the cell X_{15} = (S, A, C) then
if S $\in$ X_{15} then baaba $\in$ L(G)

Theorem

- The CYK Algorithm correctly computes $X_{i\,j}$ for all i and j; thus w is in L(G) if and only if S is in X_{1n}.
- The running time of the algorithm is $O(n^3)$.
